

MacKextLight

Beitrag von „Politic“ vom 24. Februar 2018, 11:10

For anyone with VoodooHDA problems that do not match the system volume settings (ie you move the PCM and IMix slider, but the volume does not change after the reboot) - a Picture 1.

Copy to VoodooHDA.kext from /System/Library/Extensions/VoodooHDA.kext on the desktop

Open kext with program MacKextLight

Edit marked part the value from false to true and save / Picture 2 /

Remove from VoodooHDA.kext from System / Library / Extensions

Paste the new VoodooHDA.kext into the Extensions from the desktop and confirm the save.

Restart and done

The new state is on picture 3.

MacKextLight is in zip.

Die App funktioniert schon mal ... 😄

Vorteil: Das Kext einfach nur raufziehen, man erspart sich das "Paketinhalt anzeigen" und

"Info.plist" öffnen.
