## **yosemite install on ryzen, uefi clover with bronya ryzen kernel**

**Beitrag von „ozomatzinboy“ vom 30. März 2018, 08:57**

Hi everyone in the wonderfull Hackintosh.de forum...i have been trying to install yosemite, or capitan or mavericks, via uefi clover with Bronya ryzen kernels, with no success...my architecture is ryzen7 1700, nvidia gt1030, 16gb ram vengance in one single module...gigabyte ga-ab350md3h,...actually i am running in this machine, high Sierra and Sierra with no problems using Bronya ryzen kernels for the respective OSX ...please if somebody has their machine working with ryzen and yosemite or, cap or mavericks...please help me and i can share, the config.plist, or even if somebody made it with chameleon or enohc using Bronya ryzen kernels ...please help me sharing your unvaluable info...thanks in advance...saludos desde México!!!! take care all!!!!...in my unsuccessful attempts of installations always stuck in some point, i have also tried another graphic card an ati amd radeon 5570...with no success.. 🤔 ...any help will be highly appreciated....!!!! 😄😄
