

Catalina without Internet, USB, sound

Beitrag von „Roman1“ vom 27. Juli 2019, 13:28

Hi, with macOS Catalina DeveloperBeta I installed Catalina.

USB only works one USB3.1. USB3 and USB2 does not work.

No sound. I installed VoodooHDA.2.9.2.Clover-V14. In the setup it offers me Digital-out HDMI, but there is no sound on the monitor

Or do you need to change something through Clover?

Thanks for help 😞

PS: The Internet works for Intel : IntelMausiEthernet-v2.4.0

I attach my Clover

Roman1 here

Beitrag von „Roman1“ vom 4. August 2019, 12:06

In Clover / Boot / Boot Arguments, I removed -lillubetaall. In DSDT Patches changed the listing and some others.

It was a torment and a lot of time on the Internet. But that fascinates you - doesn't it?

Now everything works fine for me OK.

If you need a Clover on the Gigabyte GA-B150N Phoenix WIFI, here's the attachment

dedalus69 thank you for your help and the whole forum
