Erledigt # HP 250 g7 stucks bevor installer

Beitrag von „Rem_Galleu" vom 8. September 2019, 11:28

Hello Hackintosh Community,

I wanted to install 'Mac OS Mojave N i r e s h' on my HP 250 g7, but it all gets stuck in front of the installer at the point: 'ApplePS2Controller: Notification consumer published: ApplePS2SynapticsTouchPad'.

(See Appendix: Image)

I also tried Mac OS High Sierra and Catalina. I tried to unplug my trackpad, but it hangs to find a trackpad and can't initialize it. I now have no idea what I can do or how to solve the problem. I would be very grateful for a quick answer.

Hi [Rem_Galleu](#)

I have to close this thread, since we are not supporting and allow threads of Hackintosh setups installed with [Distros](#) like your mentioned product.

Please try an vanilla approach to install macOS on your rig and then rephrase the question, if you still have problems.
