Erledigt Probleme mit dem Sound (Clicks & Pops)

Beitrag von „labojazz" vom 29. Mai 2020, 07:43

Hi everyone,

I've been having a recurring issue when running Avid Sibelius Ultimate on my Intel i9 9900K Hackintosh with OS Mojave installed on it.

The playback is glitchy, with clicks and pops. It gets worse when I open up the mixer panel in Sibelius. When I export audio out of Sibelius, the glitches do not happen in the exported audio file, which speaks for a problem with the sound chip.

The Motherboard is a Gigabyte Z390 Designare and I have disabled the onboard sound chip since I am running Audio out of a Focusrite Clarett 8PreX Thunderbolt Interface. This did not really resolve the problem.

The weird thing is that Audio coming out of Avid Pro Tools works just fine.

Anyone have any suggestions on how to fix this? I would really appreciate any help, as this is very frustrating and hindering any work I do on Sibelius.

Thanks a lot in advance!

Did you change the samplerate in the Focusrite?
