

OC DELL Latitude E6420

Post by “Mo-6420” of Dec 1st 2020, 9:16 am

For ALL macOS 10.X And macOS 11.X

High Sierra, Mojave, Catalina and Big Sur

100% Working

Enjoy!!![OC-All-macOS10&11-DELL-LatitudeE6420.7z](https://www.hackintosh-forum.de/forum/thread/51618-oc-dell-latitude-e6420/)

Post by “Mo-6420” of Dec 3rd 2020, 7:20 pm

I used EFI CLOVER for my macOS catalina untill the version 51r22 after that i have many problems with it and the install of macOS Big Sur too of curse.

So i change into OC (OpenCore) it's easy, simple and with no problems.

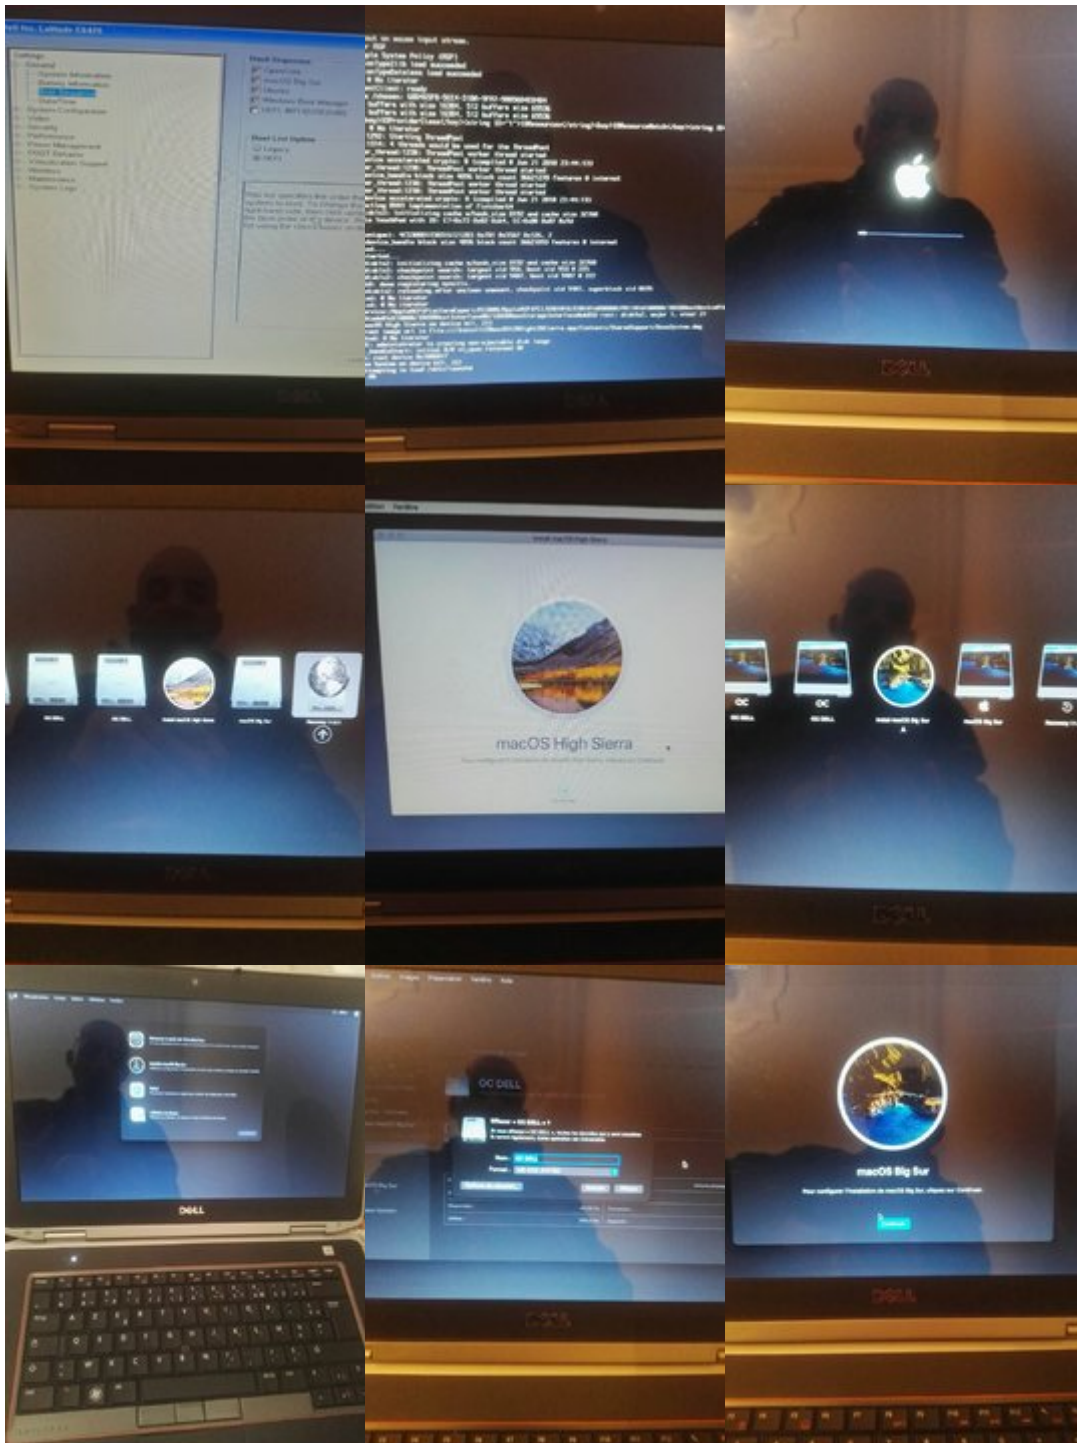

I have one suggestion don't put the folder in the EFI partition of you hard disk. Just creat a new partition (MS DOS (Fat32) and put OC Folder in it...

You have also the choice between Apple or normal boot (config or config1) and Dos or Diagnostic Boot (config2).

i have some pic.

Good luck

And Enjoy!!!

Post by “Mo-6420” of Dec 19th 2020, 12:33 pm

Hi everyone,

Don't worry in this case i will show you step by step how install macOS Big Sur in your own dell latitude E6420 with pictures OK....

First, please install any macOS 10.x (high sierra, mojave, catalina) in your pc with your own efi use clover for exemple....because we will create a new partition in our hard disk to put OC (opencore folder)...this partition will be in MS FAT don't forget Ok like that

Post by “wangmateus” of Jan 5th 2021, 10:01 pm

Hello Mo-6420

'Do you already have any tutorial about this installation!?'
I really would like to install it on my Latitude, but I still have some doubts.

Post by “Mo-6420” of Jan 23rd 2021, 8:34 pm

Hi,

First, Sorry for the late.

Second, trust me, it's easy and I believe in you.

Install any macOS: high Sierra, Mojave or Catalina, with your own EFI (clover for example).
Create through it a partition 1Gb or 2 as you like but with MS-FAT. Put the EFI OC in it.

prepare your USB macOS Big Sur and reboot your Pc

then Enter with the MS-FAT partition where we put OC EFI

and you'll see the begin of install

Good luck

Here some pict. sorry they are not in order...

after create MS-FAT partition and reboot your PC: what you should do in your Bios PC to enter

through OC EFI folder

Post by “reekoooo” of Jan 28th 2021, 10:20 pm

Hi , thank you for your great post , but unfortunately after using it to install catalina on my e6420 my hd 3000 graphics shows only 4MB vram and no acceleration for the graphics do you have any idea how to fix this issue?

Post by “Mo-6420” of Jan 29th 2021, 10:46 am

hi,

You're welcome... But i'm in the same case too... I wish the next driver OC (kext) fixe that problem or we need a new driver from Intel...

Thanks too

And enjoy

Post by “Mo-6420” of Feb 7th 2021, 2:55 pm

I have fixed the problem of monitor intel HD 3000 unsupported on macOS Big Sur by these steps:

1-insert the kext,

2-add it on the config OC and boot your PC

you'll see this pic

Good luck and Enjoy

PS: for the Vram 4Mo this is not a problem the macOS Big Sur is clean and with a full scree

Post by “Mo-6420” of Feb 9th 2021, 6:48 pm

Hi everyone,

The screen is detected as LCD monitor not as intel hd 3000 so please see the pic to have the full screen

also I put a video with 4K to see that all is clean and with no problems sorry for the video is not upload so try it alone...

Good luck and enjoy Friends...

<https://www.youtube.com/watch?v=IXuG1MWXy9I>

Post by “Mo-6420” of Feb 16th 2021, 2:47 pm

Hi everyone,

I have a surprise for all friends having a dell latitude e6420...Now our old pc is a MacBook Pro 2020

a new EFI OPENCORE for all...with no problems 100% working...

with pic...

Good luck and Enjoy [EFI-OpenCore-DELL-latitude-E6420.zip](#)

Post by “vansmocs” of Feb 17th 2021, 1:54 am

can you make tutorial start from windows 10? pls I'm still a beginner

Post by “Mo-6420” of Feb 17th 2021, 1:57 pm

Hi vansmocs,

First, i'm not a good teacher hhh sorry, but I have some personal points to you:

1-Don't install macOS with windows because you'll see many problems. For me use 2 hard drive Hdd or SSD: One for Win, Ubuntu and the efi open core partition with fat32 of course and the second will be for the macOS big sur.

2-You should download macOS from any link of someone on the net because with no Apple (macOS) system you can't download it.

3-Prepare your usb macOS on windows with transmac. See here: <https://www.acutesystems.com/scrtm.htm>

4- Now after all these steps you can beginning to install macOS on your dell.

Good luck and it's not the one solution they are many on the net...

Post by “Luluuuuu18” of Feb 17th 2021, 2:52 pm

Hi ! does it works with a Dell Latitude e6520 ?

I have one and i want to install Big Sur on it...

The e6420 and the e6520 are specifically close, so maybe it is possible 😊

Post by “Mo-6420” of Feb 17th 2021, 3:58 pm

hi luluuuu18,

I have no idea my friend. But if you'll try it and all is ok. It's a good a news...

Good luck and thank you

Post by “Luluuuuu18” of Feb 17th 2021, 4:04 pm

yes Mo-6420 i will try today 😊

But did you patched Big Sur with any patch ? because the Dell models are old and not supported natively by Big Sur...

I saw you add something in the bios. To make it clearly and to make the installation easier for me, you add the "bootx64.efi" of the EFI OC folder into the BIOS directly ?

Post by “Basti Wolf” of Feb 17th 2021, 4:07 pm

[Mo-6420](#) pls check your Pn 😊

Post by “Luluuuu18” of Feb 17th 2021, 4:28 pm

yes Mo-6420 i will try 😊

But did you patched Big Sur with any patch ? because the Dell models are old and not supported natively by Big Sur...

I saw you add something in the bios. To make it clearly and to make the installation easier for me, you add the "bootx64.efi" of the EFI OC folder into the BIOS directly ?

Post by “Mo-6420” of Feb 17th 2021, 5:38 pm

hi my friend luluuu18,

It is a new boot because efi folder opencore is in a fat32 partition so we need bios for a new order boot.

All is patched from efi opencore don't worry my friend...

Thanks

Post by “Luluuuuu18” of Feb 17th 2021, 8:19 pm

Okay. Do i need to modify anything in the « file system list » ?

Post by “Mo-6420” of Feb 17th 2021, 8:29 pm

You should use it like it is don't modify anything...

Now i'm installing the last macos big sur 11.2.1

Good luck for all

Friends

Post by “Luluuuuu18” of Feb 17th 2021, 10:35 pm

Okay i think i will try this evening.
keep us informed if everything still work 😊

good luck to you

Post by “Mo-6420” of Feb 18th 2021, 6:21 am

Ok good luck to you too and thank you...

PS EVERYONE,

I HAVE Upload 2 EFI OPENCORE:

1 THE FIRST IS OPENCORE 0.6.4 WITH MACBOOK PRO 11.5 (2015). THIS ONE WORK WITH ALL MACOS (HIGH SIERRA, MOJAVE, CATALINA AND BIG SUR).

2 THE SECOND AND IT IS THE LAST ONE OPENCORE 0.6.7 WITH MACBOOK PRO 16,3 (2020) WORKS ONLY ON MACOS BIG SUR..

Post by “Luluuuu18” of Feb 18th 2021, 9:18 am

Hi,

Thank you for the EFI files !

I am stuck to boot on the usb...

I have installed the EFI folder onto the usb directly (and not on the hard drive where MacOS is already installed), but i can't boot on the usb...

And when i try to add the boot argument in the BIOS, i'm not able to find the bootx64.efi...

This evening i will try as you said : directly install the EFI on a partition of the hard drive

Post by “Mo-6420” of Feb 18th 2021, 10:08 am

luluuu18,

You must creat a new partition my friend with MSFAT and put the efi folder on it...

After that go to the bios as the pics i uploded..

Good luck and enjoy...

Post by “Luluuuuu18” of Feb 18th 2021, 10:12 am

Okay. I'll try later 😊

Post by “Mo-6420” of Feb 18th 2021, 10:17 am

Don't use efi partition of the hard disk hdd because as you see it stuck... But finally you do it...

It's a good news...thank you too

And good luck

In my case i name the efi partition ubuntu...you do it as you like ok...

Post by “Luluuuuu18” of Feb 18th 2021, 11:13 am

I thought it was possible to take the boot file directly from the usb (i didn't use the efi partition, but i did a partition on the stick), but i didn't think it would stuck...

Thanks for your tips 😊

Post by “Mo-6420” of Feb 18th 2021, 11:30 am

you are welcome my friend and you are the fist that he install macos big sur on dell e6520...

Thank you very much

I'm so happy for us .

Post by “Luluuuuu18” of Feb 18th 2021, 11:37 am

Anyhting is done, but it would be very cool if i manage to 😊

Post by “Basti Wolf” of Feb 18th 2021, 11:40 am

[Luluuuuu18](#) which Dell you use ? Runs your device BigSur? 😊

Post by “Mo-6420” of Feb 18th 2021, 11:40 am

your are the best don't worry...

Post by “Luluuuuu18” of Feb 18th 2021, 12:06 pm

[Basti Wolf](#) i use a 2011 Dell Latitude e6520. It needs a patch of Big Sur, which is provided in this case by the OC EFI folder of [Mo-6420](#)

In fact both of the e6520 and the e6420 are close in hardware, so it is possible that it works 😊

Post by “Mo-6420” of Feb 18th 2021, 2:25 pm

my dear friend luluuu18,

It's not a problem of path just the efi partition of hdd must be format on fat32..

For me i usec2 hdd and 3 systems (windows, ubuntu and macos)..

I use windows to format efi partition of my 2nd hdd where macos big sur installing to format it on fat32 and surprise friend it works...

Post by “Luluuuuu18” of Feb 18th 2021, 3:03 pm

Ohhhh okay i didn't understand that

Thank you ! 😊

Post by “Mo-6420” of Feb 18th 2021, 3:36 pm

You are the best i know that....

Not at all my friend luluuu18 you re welcome...

Thank you too

It is easy you try to find a method to format the efi hdd into fat32 after put the opencore folder go to the bios and you see that it is not stuck ok

For me i use 2 hdd and i format it with windows don't repeat mine hhh ok find your solution ok

Post by “Luluuuuu18” of Feb 18th 2021, 4:21 pm

I'll use Windows, it's easier XD

No i'll use MacOS, because i won't have to switch between the 2 OS 😊

Post by “Mo-6420” of Feb 18th 2021, 4:59 pm

ok try it my friend and tell me

Good luck and enjoy...

Post by “Luluuuuu18” of Feb 18th 2021, 10:36 pm

it works !

I am partitioning the hdd and try to install on it.

The screen resolution is not in full HD but i haven't modify the open core files to match with the screen.

congratulations Mo-6420, you did a very great job !!

Post by “vansmocs” of Feb 19th 2021, 7:39 am

Why the wifi is unreadable and a little lagging, help me plz

Post by “Mo-6420” of Feb 19th 2021, 7:42 am

hi luluuuu18,

It's not me who do a great job BRAVO to you my friend you do a perfect job more than me.

I know that from the beginning...

It's a very very good news...

Thank you to you too and all friends who has the same pc.

Thank you...

For my friend vansmocs,

I have no idea my friend because my pc has not nvideo as a graphics.

For the intel wifi in our pc is unsupported by macos from mojave still big sur so use an usb wifi tp link like i do...

For vansmocs these steps that i did good luck if it works tell me ...see the pic.

Post by “Luluuuuu18” of Feb 19th 2021, 9:15 am

[Mo-6420](#), did you manage to enable graphics acceleration ?

I have 3 Mo and it is not well working as you...

Post by “vansmocs” of Feb 19th 2021, 9:29 am

I changed to Intel HD but it still doesn't feel smooth for the graphics?

Post by “Mo-6420” of Feb 19th 2021, 9:37 am

ok my friend i have a perfect sollution for you vansmos and luluuu18 too...

I'm not free now friend sorry....so please waiting to tell you what you should do

With my respects and big thanks too

Post by “Luluuuuu18” of Feb 19th 2021, 10:03 am

Thank you, i can't now as well so don't worry 😊

Post by “vansmocs” of Feb 19th 2021, 12:53 pm

I have been able to install macOS, it has been amazing for me, thank you

Post by “Mo-6420” of Feb 19th 2021, 2:10 pm

Hi everyone,

i m so glad and proud of you.you can now install macOS big sur.

for the graphic problem

and before we explain the solution please forget the 4mo or 512mo or 1024mo...etc

our macOS big sur detect our screen as a monitor not an intel or Nvidia graphic ok

the solution is first download this tool

<https://www.macupdate.com/app/mac/62265/hackintool>

after that go to display

and see this pics

use the kext in your open core efi and activate it on your list

boot your dell

here we go to the final step

go to monitor preference and etalonat it at maximum you see a full hd graphic now

At the end use this app to see your screen pixel

<https://apps.apple.com/us/app/easyres/id688211836?mt=12>

like me here

Post by “vansmocs” of Feb 19th 2021, 2:33 pm

thanks i will try it, btw what is your brand of usb wifi tp link?

Post by “Mo-6420” of Feb 19th 2021, 2:39 pm

this is my usb tp link and i will send to you the last pkg v5 because the factory pkg don't wotks on macos big sur

Post by “vansmocs” of Feb 19th 2021, 2:49 pm

okay, thanks for helping me, you're best

Post by “Mo-6420” of Feb 19th 2021, 2:51 pm

you are welcome and not at all

this is the pkg and sorry it v7 not v5

<https://github.com/chris1111/W...r-Adapter/releases/tag/V7>

Post by “Luluuuuu18” of Feb 19th 2021, 3:06 pm

Ok thank you i will try this later !

I have the same usb tp-link, and it works very well.

Post by “Mo-6420” of Feb 19th 2021, 3:09 pm

thank you too and it's a great pleasure for me....

Post by “Luluuuuu18” of Feb 19th 2021, 8:03 pm

I don't understand how to enable the kext for the screen...

where do you do that [Mo-6420](#) ?

Post by “Mo-6420” of Feb 19th 2021, 8:53 pm

Ok luluuuu18 i will go step by step because your dell e6520 have not the same screen as e6420

Have you dowloda this tool

Post by “Luluuuuu18” of Feb 19th 2021, 9:00 pm

Yes i have downloaded it

i made appearing the kext « display » on the desktop and moved it in the efi folder at this moment.

Post by “Mo-6420” of Feb 19th 2021, 9:04 pm

You are the best my friend

Upload me your kext

I will do that for you

I wish you do like that before you do the kext choose IMacdisplay

after add the kext into kext efi open core...you should add that on your config.plist with open core configator

boot the pc and all is done ok...

Post by “Luluuuuu18” of Feb 19th 2021, 9:47 pm

Okay i made the kext, and choosed "iMac Display" like you said, see the pic.

I attached the kext + all the files created at the same time in a zip file

Post by “Mo-6420” of Feb 20th 2021, 7:28 am

luluuuu18 bonjour mon ami tu as fais u tres beaux bolo just waiting for your efi folder ok....

Pour configurator on utilise celui de opencore not clover notez bien ca dans le cas ou tu veux modifier your efi....

Wait just wait

Have a nice day

Post by “Luluuuuu18” of Feb 20th 2021, 9:26 am

Bonjour,

Tu vas adapter le dossier efi pour mon e6520 ?

Merci bien, et oui je sais pour open core j'avais téléchargé propertree pour le modifier

Post by “Mo-6420” of Feb 20th 2021, 1:43 pm

Salut luluuuu18,

voici ton kext monitor e6520

copies le sur le dossier kext efi et remplacer l'ancien ok.

puis redémarrer le pc

puis vas au apple monitor prefernces et faites comme les images ci dessous

attention en deuxième étape décocher "utiliser le point blanc natif" et fais toi moi modifier la bar de 6000 au 9500

faire la suite des étapes jusqu'au écran étalonné et voila tu as maintenant un écran lcd iMac full hd pour te rassurer voici un lien comme intel and Nvidia mais pour écran lcd telecharge le et il te donnera pixel

c'est un mètre a ruban écran lcd Mac ok

<https://apps.apple.com/us/app/easyres/id688211836?mt=12bonne> chance

Post by “Luluuuuu18” of Feb 20th 2021, 2:38 pm

J'ai fait tout ce que tu m'avais dit, mais ça ne fonctionne pas... 😞

=> remplacé l'ancien Kext intelhdgraphics par le nouveau que tu m'as envoyé

=> fait l'étalonnage comme tu m'as indiqué

Il m'affiche toujours la même définition d'écran (ci-dessous le screen)

Post by “Mo-6420” of Feb 20th 2021, 2:43 pm

BRAVO

Tu l'as fait mon ami

Vas au youtube et vois toi un video 4k

Tu ressens la grande difference

Mefis toi des apparences mon ami

Attention

Le graphisme 3mo n'a rien a voir c'est juste efi opencore qui detecte intel

Parcontre macos detecte le comme un monitor 3mo

Dans mon cas 4mo et c'est le mac qui est juste pas opencore ok

Et pour te rassurer tu utilise windows si tu vois le pilote intel tu trouveras la meme resolution

1024x768

So no problem et laisses le chiffre on utilise le pc comme ecran pas comme carte graphique
hhhh

Post by “Luluuuuu18” of Feb 20th 2021, 2:56 pm

Ahhh oui je viens de voir merci !! 😊

mais j'aimerais bien que la résolution soit en full hd ' :)

Post by “Mo-6420” of Feb 20th 2021, 2:59 pm

luluuuuu18 elle est full vas toi meme au parametre youtube et modifie les mon ami

C est a cause de la conecion ca car le defaut de resolution du au debit

Et vois cette merveilleuse image

Voici les deux resolutions de mon win server 2019 and ubuntu 20.04

Post by “olegbir” of Feb 20th 2021, 9:07 pm

Second efi folder. Failed to load configuration. Any idea?

Post by “Mo-6420” of Feb 20th 2021, 9:30 pm

the second efi is for only the new macos big sur but the old one is for all

Ok

Be carefull:

I HAVE Upload 2 EFI OPENCORE:

1 THE FIRST IS OPENCORE 0.6.4 WITH MACBOOK PRO 11.5 (2015). THIS ONE WORK WITH ALL MACOS (HIGH SIERRA, MOJAVE, CATALINA AND BIG SUR).

2 THE SECOND AND IT IS THE LAST ONE OPENCORE 0.6.7 WITH MACBOOK PRO 16,3 (2020) WORKS ONLY ON MACOS BIG SUR..

Post by “olegbir” of Feb 20th 2021, 10:40 pm

Last MacOS Big Sur, second efi folder, failed to load configuration

Post by “Mo-6420” of Feb 20th 2021, 10:51 pm

What is your pc

The folder is for dell latitude e6420

Not all pc

Post by “olegbir” of Feb 20th 2021, 10:53 pm

Dell e6420, only intel 3000, 1366*768

Post by “Mo-6420” of Feb 20th 2021, 10:58 pm

what's your problem download a pic

First have you change the bios to uefi

And the sata to ahci

And the most important

Update the firmware bios to a26

My friend it works 100%

Tested

Post by “Luluuuuu18” of Feb 20th 2021, 11:02 pm

J'ai vu le full hd et c'est très beau en vidéo YouTube, mais ce que je veux dire c'est que l'interface même de macOS est en basse résolution, et pas en full hd :)

J'aimerais avoir la résolution maximale, et ne pas être limité en 1024x768, mais un grand merci à toi en tout cas et grand bravo pour avoir adapté macOS Big Sur sur le Dell !!

Post by “Mo-6420” of Feb 20th 2021, 11:16 pm

Hhh mon cher ami luluuuu18 tu es obsede par le chiffre 3 4 512 1024.....mo

Je veux te dire une chose le nom intel 3000 hd est dtecte par le kext de big team opencore and clover et pas par le macos big sur notre carte graphique est unsupprted

Cest pourquoi il a accepte notre kext car cest juste un ecran

Et sois sur et certain que limage est plus belle que mon windows ou ubuntu qui ont deja le pilote intel dernier cri

Post by “vansmocs” of Feb 20th 2021, 11:19 pm

Hello, can I open Photoshop on Big Sur, because I was in Catalina a little lagging when I opened any application

RAM : 4GB

BIOS : A25

I use Config not Config1

Post by “Mo-6420” of Feb 20th 2021, 11:21 pm

hi vansmocs,

And sorry my friend i have no idea...

Post by “olegbir” of Feb 21st 2021, 9:20 am

1. Creat new mbr partition 200 Mb fat32, flag boot 2. Copy efi folder on it 3. In bios add boot option \efi\boot\bootx64.efi. 4. Os: failed to load configuration

Post by “Mo-6420” of Feb 21st 2021, 9:32 am

what is your bios version

Listen update bios into A026

Then F2 or F12 change sata into AHCI

Then change legacy into Uefi

Than creat boot and copy

Try and try and try it is not easy my friend

Post by “olegbir” of Feb 21st 2021, 10:03 am

Bios a026, ahci, uefi

Post by “Mo-6420” of Feb 21st 2021, 10:18 am

if all is ok

The problem will be in your usb macos big sur.

Prepare it correctly and from a mac not from windows or ubuntu and the last one is

Big sur 11.2.1

My friend try i have no idea what happend with you....

Post by “olegbir” of Feb 23rd 2021, 3:31 pm

Opencore dont see usb drive, sos.

Post by “Mo-6420” of Feb 23rd 2021, 4:19 pm

your usb macos big sur is not prepared correctly

Please use a macbook to do a clean one ok...

Post by “olegbir” of Feb 23rd 2021, 4:33 pm

I use hackintosh to make usb, my usb is working on over machines fine

Post by “Mo-6420” of Feb 23rd 2021, 4:47 pm

see your bios because i have no idea what is your problem...

Just try and trust me you will do it....it is not easy but you ll do it at the end...

Good luck

I think after many times of trying that the problem of stability coming form macos big sur not our efi..

I use catalina now 10.15.7 and it is amazing

Be carrefull:

Our cpu and graphics i5 or i7 2nd gen. Are not supported from mojave to big sur...

The name of our graphics is detected by the big big big team group of opencore and clover i love these masters hhhh

I have for exemple modify the graphic name as you see but i see no change...

Enjoy friends and thanks for all....

Post by “Ezesoft” of Feb 25th 2021, 1:35 am

okay step 1 completed, update my bios to a26 I was very scared but I already did it hahaha...what's next?

Post by “Mo-6420” of Feb 25th 2021, 11:03 am

F2 or f12 enter into bios change it from legacy to uefi.

Your sata change it into ahci

Prepare your usb macos

And do the install

See our discussion with other friends it help you...

Good luck

Post by “Ezesoft” of Feb 26th 2021, 4:09 am

I managed to install Mojave and now I have

"Install big sur.app" but when creating a bootable usb say "sudo: /Volumes/data/macOS-Big-Sur-11.0.1-20B29/...Install macOS Big Sur .app / Contents / Resources / createinstallmedia: command not found "I need you to upload the * createinstallmedia * file to see if I can make the USB bootable

Post by “Mo-6420” of Feb 26th 2021, 10:39 am

it is easy my friend

Open root account not your account

There you have no problem to creat usb boot ok.. .

Post by “Ezesoft” of Feb 27th 2021, 5:29 am

I installed Catalina because my BigSur dmg is

damaged, now I have a problem when I connect my passport via usb, I cannot connect my iphone or any other device in other ports, so far very grateful for your help

Post by “Mo-6420” of Feb 27th 2021, 12:08 pm

i have no idea my friend...

Post by “Ezesoft” of Mar 3rd 2021, 1:42 am

[Quote from Mo-6420](#)

i have no idea my friend...

i can connect monitor via VGA???

Post by “vansmocs” of May 10th 2021, 5:59 am

can i use egpu RX560 for this hackintosh?

Post by “JayL31337” of Aug 1st 2021, 8:23 pm

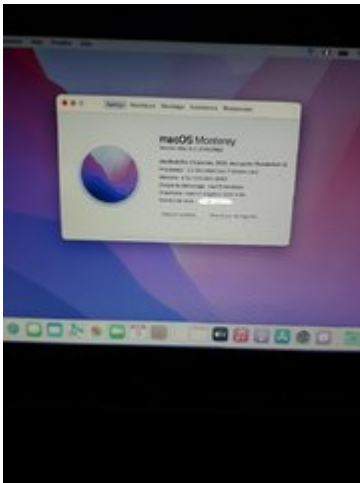

Can you please message me I have the exact same laptop as you I could use some help. I would very much appreciate it.

Post by “Mo-6420” of Aug 9th 2021, 2:06 pm

NEW NEW

macOS Monterey

But wait for the release one because many problems in this macOS beta 4

WOOWWWW, days ago I wanted to tell you that if you have tried to play videos in MKV format or something other than MP4, it is too slow

Post by “B4tMaxt” of Aug 9th 2021, 9:45 pm

It looks like there's no graphics acceleration

we can try with <https://github.com/chris1111/Legacy-Video-patch>

Post by “Mo-6420” of Aug 10th 2021, 6:39 am

Hi Friends,

For me, and it's my opinion, macOS Monterey or macOS 12 BETA is faster than macOS Big Sur but still slowly than macOS Catalina

NOW, i can say that i have no problems with it

Thanks guys and enjoy!!!

Post by “B4tMaxt” of Aug 10th 2021, 9:46 am

Your Graphics is still not accelerated in macOS

Post by “Mo-6420” of Aug 10th 2021, 2:51 pm

Forget the unsupported graphic intel 3000 and cpu i5 2nd gen. Because hackintosh patch replace these things with an other way....

I have no problems but dell latitude e6420 is older now and of curse it's slowly than new gen.

Thx

I need you to tell me if you have been able to play a video in MKV format in full screen without lagging. please

Post by “Mo-6420” of Aug 12th 2021, 10:31 am

hi,

I'm sorry i can't...but steps are the same of macos big sur....just update the openore 0.7.3 and kexts...

Good luck and enjoy
