

Sleep/Wake failure

Beitrag von „valenb“ vom 17. März 2021, 18:01

Hi!, sorry for the language, i just cant find a more active community online. I have installed BigSur on my laptop with opencore's guide.

CPU: I5-8250, GPU: Intel UHD 620, RAM: 8 GB, Laptop Model: HP AH-0003la, Audio Codec: ALC285, Wifi/BT Card: Intel 3168 Touchpad: SMBus Synaptics

Working:

- iCloud/iServices.
- WiFi/Bluetooth.
- Touchpad, with gestures.
- Screen brightness control from keyboard (F2-F3).
- Sound.

To-Do:

- Battery HotFix
- Make sure that the power management patch works

Not Working

- Sleep/Wake

If you can help me fixing the sleep wake issue it would be appreciated. When i put the laptop

to sleep it makes it to a sleep state, but it wakes almost instantly.

As said before, sorry for the language. (i´ve attached the wake log)
