Lenovo U510 i3 3227u Opencore,Clover Bootloader Collection (10.10 - 12.3)

Beitrag von „Giorgatzelos“ vom 4. Juni 2022, 00:08

Hi! Hello everyone. i am a MacOS fan and Hackintosh lover. I had a need to share my efi folders from Yosemite to High Sierra, and from Big Sur and Monterey. There is one thing I never managed to fix completely and this is sleep/wake. in the last attempt i managed to fix everything (including card reader) but not sleep/wake. i managed at the past to fix it but since 10.13 i don't seem to understand why it is broken. Maybe its due to Audio kext...idk So i give you all my files for guys with similar systems (as i used stuff from others at times) to have a chance run MacOS on their computers. You wont find any of these EFI anywhere on the web for this particular laptop. Only 10.9 Mavericks and under maybe...

10.10.4, 10.13.6, 11.0.1 are Clover-based EFI folders and 12.3 Opencore-based EFI. i wish i had some help at the beginning with opencore also :p

The Wifi card was changed years ago with BCM4352 and runs a modified BIOS for whitelisted WIFI cards.
