

Rückfrage zu HWC: GIGABYTE Z690 GAMING X

Beitrag von „Muzman“ vom 14. August 2022, 17:07

Hi, [greecedrummer](#)! I got a big problem with the Hackintosh factory after upgrading to the new bios F20A. I was already completely desperate and wanted to make a return to the old bios F8b. But I remembered about your wonderful Hackintosh Forum. And lo and behold! In your topic, I found a solution to my problem of launching a Hackintosh with a new bios. Please accept a big thank you from me.

Edited 4 times, last by [Muzman](#): Bootloader: Open Core; MoBo: Gigabyte Z690 Gaming X DDR4; CPU : Intel Core i7-12700F; GPU : Radeon RX 5700XT 8GB; Mem : 32 GB DDR4 4800 2x16GB; SSD M2: OSX12 ; SSD M2: WIN10; Case: Big Cooler Master with 1000 watt power supply.

this is a beta Bios. Better use one without suffix
