

Anfrage aus dem HWC - Gigabyte z690

Beitrag von „Muzman“ vom 18. August 2022, 12:27

Anfrage an [grecedrummer](#)

Dear Moderator! Don't block my important message!

Hi, [grecedrummer](#) ! GigaByte has a new (corrected old) bios F8. Without a letter index. This is after the bios F20A. Dear grecedrummer! What do you recommend? Your opinion is very important! <https://www.gigabyte.com/Mothe...0/support#support-dl-bios>

Beitrag von „schluki“ vom 20. August 2022, 11:01

Dear Muzman, as far as I know, Bios-Version with a letter are alway beta-versions, meant for testing. Only Versions without a letter are final and recommended for daily use. But I might be wrong....

best regards

lukas

Take F8. Will be the best choice.

[F8 Bios Update](#)

I'm not a fan of current BIOS updates, but in this case you have to do the update.

Please use this EFI for this. Then everything works!

Please do not forget important procedures:

Set bios from standard settings to the recommended ones.

Please do not save settings from old bios to the new one! Does not start!

NVram reset is mandatory!

Then load your macOS!

Good luck my friend 🤖
